Team-6: Icebreakers-2021
PRNTRS

Problem Statement: Due to the urban landscape and financial strains, not many people have a printer/access to printers. The long wait times and disorganised code of conduct is something that plagues us. Covid-19 has mandated contactless procedures and thus comes the question of how we can make document printing safer.

Solutions : To create an web-app, which sends a document from customer to vendor by adding print slots thereby eliminating long wait times, inefficiency and improving the safety of the customers involved.

Milestone 1:
1. Designing the Landing page.
2. Designing a functional login page for both the customer and the vendor.
3. Create a system/procedure wherein the customer can upload his/her files.
4. Getting familiar with the database.
5. Web Logo creation.

Milestone 2:
1. Developing the web-app.
2. Adding the finishing touches to improve UX

Future Potential/Features:
Addition of an OCR reader, which works on ml and can possibly reduce document size.
